

Anemometer

Scientific Instruments

A scientific instrument used to measure wind speed and direction, an anemometer is a common instrument used in weather stations. Being exposed to the elements, the material used for this part must withstand varying humidity, water, and UV conditions without resulting in quick and precipitous degradation of material performance. Somos® WeatherX™ 100 is a great option for customers who need parts with high mechanical performance, accuracy, surface finish, and ease of printing.

System	Origin® One P3™ DLP
Material	Somos® WeatherX™ 100 NEW
Build Time	5 hrs, 13 mins
Material Used	12.2 cm ³
