

End-of-Arm Soft Gripper

Featuring the P3™ Stretch™ 475 material printed on the Origin® One, these soft-grippers make use of the compression and high-rebound capability of the material, which features 200% elongation at break and 47A hardness. This solution is perfect for operations making high-finish parts that require soft contact that leaves no trace. This soft gripper is a great end-use solution or a stop gap part to help keep production workflows on track. In just over 3 printing hours, a single Origin One machine can produce 6 grippers that can be post-processed and installed on the shop floor in just 20 minutes.

System	Origin® One P3™ DLP
Material	P3™ Stretch™ 475
Build Time	3 hours for 6 parts/ 20 minutes post-processing
Material Used	97cc for 6 parts
