

Microsoft Surface Laptop

Gone are the days of settling for prototypes that merely hint at a designer's vision. With the advanced capabilities of our PolyJet™ technology, we can now recreate prototypes that truly capture the designer's intent. The Microsoft Surface Laptop stands as a shining example of this breakthrough, where the metal chassis and Alcantara keyboard deck blend seamlessly thanks to precise color matching techniques employed by Microsoft using our J850™ Prime printers.

System	J850™ Prime
Material	VeroUltra™ and VeroVivid™
Build Time	10 hrs, 58 mins (total)
Material Used	2110 g
Support Material Used	722 g
