

# Electronic Connector

Used across automotive, industrial, and other sectors, connectors are critical when designing and implementing electrical systems and often require ESD properties. Deflect™ 190 ESD can be used for connectors, like this one, which require high accuracy, surface quality, temperature resistance, and ESD performance. This material, when used on the Origin® One platform, offers a robust solution for customers looking to produce out-of-production components for maintenance and repair, low production run volumes, and testing custom part designs.

System	Stratasys Origin® One P3™ DLP
Material	P3™ Deflect™ 190 ESD
Build Time*	1 hr, 17 mins
