Aircraft
Curtain Header

This curtain header is an example of using 3D printing for aircraft interiors. Custom branding and texturing can be added for better aesthetic finish. It would be primed and painted for actual cabin installation. The curtain header is installed over the aisle to hang curtains to separate cabin seating areas.

System	F900®
Material	ULTEM™ 9085 Resin
Build Time	42 hrs
Material Used	107 in³ (271.8 cm³)
Support Material Used	2.16 in³ (5.5 cm³)
