

Audio Speaker Cover

This speaker cover highlights the F3300™ printer's multi-resolution printing. It was printed with a double-high (thicker) infill and finished with a thinner outer contour for finer details and improved aesthetics. F3300™ multi-resolution printing builds parts faster by combining more material deposition with a higher resolution (thinner) layer thickness in the same build. This capability is enabled by the F3300's multi-extruder feature, designed for faster throughput relative to single-extrusion printers that require tip changes to alter the layer thickness.
