

Maxillofacial Model

This surgical model illustrates teeth with their roots in relation to the jaw nerve. Stratasys multi-color, multi-material dental printers allow the integration of transparency and color differentiation. This creates highly realistic models, for better surgical planning, practice and determining the optimal therapeutic approach, leading to better results.

System	J5 DentaJet™
Material	MED610™ Bio-compatible material, VeroMagenta™ V, VeroDent™ PureWhite
Build time	11 hours 59 min
